

GENERATING MEGAWATTS AND MEGA-JOBS

Wind and solar energy have the power to drive Ohio's economy forward.

Ohio's Speaker of the House Jon Husted recently made a strong commitment to growing Ohio's economy by investing in and developing Ohio's clean energy resources. This commitment would set in motion not just more wind power, but also an expansive job-creating machine, churning out thousands of new Ohio jobs in manufacturing and construction. And that's just the beginning. Using more renewable energy and energy efficiency would also lower and stabilize home energy bills, provide more tax revenue for local communities and make Ohio more energy independent.

Governor Strickland and the Ohio Senate President Harris previously helped move renewable energy forward with their proposals. Now is the time for all three leaders to work together and deliver clean energy for Ohio's economy.
